

## MAG-FLUX® HTL

Portable hydrant testing device for flow rate measurement and hydrant flushing

The mag-flux® HTL is a mobile hydrant testing device designed to meet the demands of modern water management and fire protection. With this innovative device, you can quickly and accurately check the performance of hydrants and conduct comprehensive water network analyses.

Measure pressure, flow, and optionally temperature and turbidity, and conveniently transfer all measurement data via Bluetooth and the field-tested app to the software from [Wasserkarte.info](http://Wasserkarte.info).

Benefit from the versatile applications and extensive analysis options of the mag-flux® HTL to evaluate your measurement results.

### ADVANTAGES

- » Certified safety through calibrated references (to measurement standards according to EN 17025)
- » Resource-efficient by eliminating hydrant flushing
- » Extensive analysis options for measurement results
